

EDD Presentation Evaluation 2019

Tyler Nolan

Comments about the design process and development process:

Very detailed description of process thorough elaboration on each step

Very solid presentation

Noah loves to make sound effects

Good connection from geometries (types) to regulations

How did your budget play a role in the project?

Very detailed and very well researched (2)

Would like to see more data behind testing

What would be the cost?

Do the pieces fit in the shoe?

Excellent job getting consultants.

Great passion. (2)

How does the spike snap into a threaded hole?

Great perseverance to chase down manufacturing/prototyping assistance

Great job consulting experts

Comment Comments:

There is a lot of great details but is it too much?

There were a few times where it took a moment to collect thoughts

Noah had a few small bits of brief informality in tone

Sometimes got sidetracked on stories in the middle of important ideas

I liked the background. However, it could have been shorter

Make sure you finish your phrases. Don't die off at the end

Great work at keeping audience engaged and interested (2)

Very in depth

Good connections

Stumbled over some words (2)

Overall, very professional presentation

Intro seemed too long

A bit quiet (2)

Well rehearsed (2)

Good intro, very original and gave history (3)

Wish you went into more detail about similar solutions

Put some enthusiasm in the appropriate spots.

Survey responses-outstanding!

What you did/didn't know-talk about learning experiences

Did a great job with answering the questions

Very seamless

Good job embedding engineering process into presentation

Great hook

Lack of passion?

3. I was pleased to see that people thought our speaking was seamless and well-rehearsed. I was extremely nervous going in and felt slightly unprepared so to have people say that we were great at the execution of our presentation pleases me I was also happy to see people appreciated how much research we did and how far we pushed this project and how much passion we had for creating the Snap-A-Spike.

4. I was surprised to see so many comments regarding things we addressed in our presentation. Issues such as cost and functionality were definitely addressed so I am a little confused as to why those were concerns. Also, there were quite a few comments about lack of data for testing but Noah and I made sure to address the fact that our inability to create a prototype left us unable to test. Also I am still left wondering if the hook was good or if it was too long and distracting. Other than that I think the other negative comments were warranted.

5. I think the assessments made by the evaluators and my classmates were very accurate. I would say there may have been a lapse in judgement surrounding the testing phase of our project. We were unable to test our product and a few people comment on the fact that that part of our project was missing from our presentation. I am not sure if they simply missed that part of our presentation or what had happened because after reviewing the video I think Noah and I addressed that part of the project very thoroughly. After review I also think the intro of our presentation was of acceptable length and did not distract from our overall presentation. Also after watching the video of our presentation I noticed that I definitely seemed nervous through the first part of the presentation and became more and more comfortable as the presentation went on.

6. The main thing Noah and I discussed revising about our presentation would be our preparation. We both agree that we were very happy with how our slides were set up and how our presentation was organized. The one main thing we would really have liked to be better was the execution of the presentation. We wish we would have practiced more to really solidify our words and to prevent parts from being so choppy. If we had what we wanted to say more ingrained in our heads this choppiness wouldn't have been so prevalent.\

8. The most profound statement I can make about my presentation is that it was heavily influenced by people other than just Noah and I whether that be community consultants, classmates, or even family members. To have a lot of those influencers in that room to see the culmination of all of the work put in was really cool and a great memory for sure.
